About the Topical Lantern Slide

From Gart Westerhout

HOME ABOUT FAQ LIBRARY SERIES VIDEOS

Category Archives: Magic lanterns

[The missing link](#)

The collection is Tyler's Topical Slides, a set of lantern slides reporting on current events put out by Walter Tyler, a renowned lantern manufacturer whose business subsequently (after his death in 1909) diversified into motion picture equipment and film distribution as the Tyler Film Company.

Follow-Up of Livingstone Slides

From e-mail Jan 01/12/13

Request from the Castle Kilbride asking if any of us could provide copies or scans of David Livingstone slides for an exhibit that starts in March.

*From Sherri Gropp
Castle Kilbride
Baden, Ontario,
Canada*

We are absolutely thrilled to have received a response from your member Dick Moore. Not only does he have the full Livingstone set he also has the text to accompany. We are grateful to his kindness and generosity for allowing us to use these images in our exhibit. We are also working out the possibility of having him travel to Castle Kilbride to put on a show using different slides from his collection which focus on the connection between Stanley and Livingstone. We are very thankful to the Magic Lantern Society for helping us out and opening our world to your wonderful membership. We will keep you posted on the date of the show.

Thank you very much.

Well Done Members

Thanks to all the responses and offers of help from **Dick Moore, David and Lesley Evans, Ralph Shape, Gale Wollenberg, Joke Sebus, and Janelle Blankenship**. A great response from our members.

Don't miss this! Free admission to the public!

Prof. M. LINDSAY LAMBERT

returns with his
MAGIC LANTERN SHOW

Travel back in time before the arrival of the cine world of entertainment when the magic lantern was in vogue, and the "Professor" held your attention with scenes that could carry you afar to Africa and Europe. Be entertained with patter, song, sound effects and tricks of action added to the images. Experience the thrill of a magic lantern show of a century ago!

LINDSAY LAMBERT of Ottawa, Ontario has presented magic lantern shows for many years now using an authentic magic lantern. Most of the slides used are original lantern slides including special animated slides, hand coloured slides and photographs.

His Russian iron and brass lantern was known as the "Iron Duke" and was made by the London firm of Butcher & Sons around the turn of 1900. Originally illuminated by a three-wick oil-burner, the light source was subsequently replaced with a limelight jet, and finally a 100-watt halogen lamp equipped with heat-absorbing glass.

From
Ron Easterday
and
Larry Cederblom

First Night Advertising

Hand color your very own magic lantern slide and we will project it on the big screen with our antique magic lantern. See moving pictures that proceeded the movies.

The kids and parents that stopped by really seemed to enjoy it, and they were thrilled to have a little something to keep and take home. Over 100 slides were hand colored during about 2-1/2 hours.

A SECOND LOOK!

The story about collector Frank Mehlenbacher of Rochester in our latest issue of *Photographic Canadiana* needs to have a second look. After publication, Frank indicated that he was sure the "engraving camera," as outlined on page 12, was not so. The large size and construction with three chambers certainly indicated that it would fit into the category of engraving camera.

Mehlenbacher has it fitted up with a #3A Ross Portrait lens that would seem to fit the part of a portrait camera. He has an extra extension bed to rack the bellows out even further that would make it into an even bigger monster.

A small label on the front of the camera indicates it was made by E & HT ANTHONY so I decided to GOOGLE for some infomation. An Anthony catalogue of 1892 showed up and I was able to see exactly what this camera was used for.

image. A service door on the side of the compartment enables the photographer to set the lens settings.

Thus a positive could be made from which a duplicate negative was produced by contact. Other systems saw a contact positive first made from the original negative onto carbon tissue. Then an

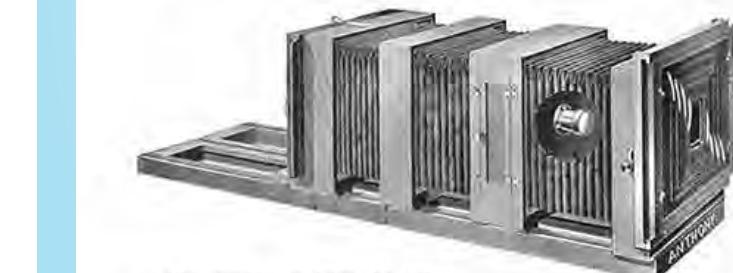

negative to begin with or had a large group to photograph, he could simply equip it with a portrait lens, make sure that the camera was light-tight and hope for the best.

From Tom Rall

In the PHSC newsletter I wanted to point out the page 6 story on the Anthony enlarging/reducing camera and its ability, among the other functions, of making lantern slides!

So it seems that collector Frank Mehlenbacher has one of the largest of Anthony's copy cameras to make his fantastic collection even more commendable.

If you haven't seen this exclusive story, better join the PHSC today and get your own copy of the journal. There's more good stories to come!

The camera is listed as the *Climax Enlarging, Reducing and Copying Camera* which was available in eight different sizes from 6½ x 8½ to 20 x 24 inches. Prices at the time ranged from \$30.00 to \$110.00.

"Directions for Use" were given at the bottom of the page. To copy a negative it is affixed to the opening at the front of the camera by holding clips. A lens is mounted to the first partition (**inside the camera**) and the bellows pulled out far enough to render an enlarged

enlarged negative was made via the copy camera to the size desired for printing of final prints.

An advertisement also indicates that this copy camera could be used to make lantern slides/transparencies which were in demand (by reduction of the original negative).

This is not to say that a gallery would or could not use this camera to take portraits. If a photographer needed a large portrait-head

LUCERNA an Online Resource on the Magic Lantern

LUCERNA – the Magic Lantern Web Resource

LUCERNA is an online resource on the magic lantern, an early slide projector invented in the 17th century. For more than 300 years the magic lantern has represented and fed into every aspect of human life and events of the world. It is still used today, both in its original form and through direct descendants like the modern data projector.

LUCERNA includes details of slide sets, slide images, readings and other texts related to slide sets, lantern hardware, people and organizations involved in lantern history, and much more.

Search the LUCERNA database

The Lucerna project is a collaboration between lantern researchers from:

- Screen 1000, Media Sources, University Trier, Germany
- Screen 1000, Media Sources East, University of Brighton, UK
- Magic Lantern Society, UK
- Indiana University, U.S.A.
- Utrecht University, The Netherlands

Background: Pre-launching the LUCERNA data

The project is still at an early stage, so you may not find everything you're looking for – if you have a specific query or can contribute something, please [contact us](#), we'd love to hear from you.

Access to the Lucerna data

Anyone can search and read the data in the Lucerna database

If you want to add or edit data you need to [log in](#) with your Lucerna username and password

If you don't have a Lucerna username and would like to contribute to the project please [contact us](#).

If you don't have a Lucerna user-name and would like to contribute to the project please contact us.

A Challenge and a Request

From Terry Borton

At first these two pictures may appear to be the same image -- one in black and white, one in color. But "One of these things is not like the other one."

The color image of Bull Run is from an early slide, perhaps by Nisle, a little-known fore-runner of Joseph Boggs Beale. The b&w is by Beale. Beale often re-worked earlier images, even of famous artists like Doré. (In fact, he replaced almost all of Nisle's images. Often Beale re-conceived the image substantially, usually in an attempt to improve its projectability, or to improve the storytelling quality of the slide. Here the changes are slight, but there are many of them. Thus the challenge: How many changes from the color image can you find, why do you think Beale made them, and were they in fact improvements? (This is a home challenge. No need to respond.)

And here's the request: If you have a color slide of Beale's image, we'd love to have a digital copy to add to our archive, and to make the comparison between the two more direct. (We might want to include this little challenge in our next took.) Thanks if you can help!

Wood Cabinets

From Kentwood Wells

This sounds like a Keystone slide cabinet.

From: Teresa in Cincinnati
To: Wells, Kentwood
Subject: Wood cabinets

In an attic we found a 3 piece cabinet. I researched the name on it and it is to house the slides. The man who lived there worked in a school. It is a neat card catalogue with drawers and doors. I just don't have any slides to go with it. I wondered how I could let people with slides who may need a cabinet know that I have one.

<mailto:teremill9@gmail.com>

From Suzanne Wray

I'm glad to see that my friend Peter Morelli joined the group! This is no doubt a result of the recent Pilgrim's Progress Panorama symposium in Saco, Maine, when Terry Borton presented the story of the Pilgrim's Progress in magic lantern slides on the same night the replica (digitally printed) Pilgrim's Progress Panorama was shown. It was wonderful.

Fascinating Photographs Of Russian Revolution Revealed

Russian-born photography aficionado Anton Orlov couldn't believe his luck when he was allowed to rummage through a number of old storage chests in the basement of a house in northern California in 2005. Inside, he found a treasure trove of hand-colored glass slides taken by an American pastor named John Wells Rahill during the Russian Revolution in 1917. There were also extraordinary slides from China and Japan in the mix, as well. Here is a selection of those photographs

Interesting Slide Use

no trash project

Working toward a package free, waste free life.

Museum of Natural History project.

The slide projector is performing its intended function, serving the Trash Project. The collection itself has been taken from the series "The Magic Lantern Cinema." The series is based on nearly 6,000 antique glass magic lantern slides from the Museum of Natural History's collection.

To my great pleasure, my professional projects occasionally overlap with my No Trash Project. I've mentioned before that I work on an experimental film series called The Magic Lantern Cinema. The name is taken from an early image projection technology that was developed in the 17th century. My co-organizers and I program monthly screenings around Providence. We present short films in both digital and celluloid film formats. I recently had the opportunity to work with the Museum of Natural History to program a show in their planetarium. Among the museum's archive holdings is an extraordinary collection of nearly 6,000 antique glass magic lantern slides. Amazingly they also have a magic lantern projector that was donated by a volunteer.

Large Lantern Slide Collection

From Web Site

<http://www.vintag.es/2012/11/old-egyptian-lantern-slides.html>

Old Egyptian Lantern Slides

In 1849, the Philadelphia daguerreotypists William and Frederick Langenheim introduced the lantern slide: a transparent image on glass that could be projected, in magnified form, onto a surface using a “magic lantern,” or sciopticon. This new technology expanded the uses of photography, allowing photographic images to be viewed by a large audience. With lantern slides, Museum curators and educators could illustrate their lectures, letting audience members see detailed studies of objects and sites from around the world.

The Brooklyn Museum's lantern slide collection was started by the Museum's curator of fine arts, William Henry Goodyear, in the late nineteenth century. With the assistance of the photographers Joseph Hawkes and John McKecknie, Goodyear reproduced images of archaeological and architectural sites in Europe as well as images of the Paris Exposition, which Hawkes often hand-colored for more realistic effect. The lantern slide collection also developed through the efforts of the curator of ethnology, Stewart Culin, and his successor Herbert Spinden, who created and purchased images of objects and sites. **The Brooklyn Museum's Library now holds 11,710 glass lantern slides.** Read more about the history of the lantern slide collection.

As Seen On

**set of
Antique INGENIOUS
HAND-MADE MAGIC
LANTERN SLIDE SHOWS
w/speaker & lights**

Time left:
3d 21h (Jan 20, 2013 11:55:18 PST)
Starting bid: US \$329.00 [0 bids]

Shipping: \$18.00

Item location: Coatesville, Pennsylvania,
United States

These are a set of one-of-a-kind meticulously hand made magic lantern box shows. They have a light switch on the side to turn them on. The speakers are adaptable to a radio or record player.

They each depict a story of their own. One is titled "WHERE IS MY BABY TONIGHT?" It is a story of infidelity and alcohol.

The other one is titled "SWANEE RIBBER". It is a story about slavery in the south.

They each measure 8 1/2" high, 5" deep, 7" wide. Each one has 7 slides glued together to make each lamp (each slide is circa 1890-1910). They have little round knobs for feet- the one is missing but it should be easy to replace.

They are awesome, educational and show a part of our history. It took many tedious hours to make them with good craftsmanship, and after having enjoyed them, they are now ready to go to another good home!

The Museum of Moving Image in Dubai

From Jack Judson

Take a look at the new museum with magic lanterns in dubai-----wow!

The Museum of Moving Image in Dubai is now waiting for a date for its official opening and you can follow our progress on the museum blog which you can find at:

<http://dmim-blog.com/category/museum/>

A screenshot of a blog post titled 'The Magic Lanterns'. The post includes a small image of the museum interior, a link to 'January 6, 2013 — Lamp & Lantern', and a section titled 'Recent Posts' with links to 'The Logo', 'Gems & Glass', 'The Magic Lanterns', and 'Hall of 19th Century Oil and Magic Lanterns (In Progress)'.

A Site of Interesting Optical toys

Pierre Patau Elisabeth Calley
Games, Juvenilia, Optical toys, Magic, Movable books

Thank you for visiting our site, you are welcome to browse through our pages or you can do a search by keywords.

We have updated our website, note that depending on your browser settings you may have to empty your cache in order to see the latest version of our website.

We are interested in children's games (mainly 19th Century) and the world of entertainment at home and on the street before the advent of cinema and television.

Our stock of fascinating games and optical toys as well as all sort of related items from magic sets to paper automaton is ever changing.

We have been dealing for 25 years with private collectors as well as institutions all over the world.

One of the most exciting part of our quest for new stock is that we very rarely duplicate items and that after all these years we still discover unknown pieces.

We also list regularly on eBay; to view our current auctions click on [picred44](#) and [paper toys](#).

We are members of the Ephemera Society and the Magic Lantern Society.
